The future of the „PIBienêtre“ project

Some informed thoughts

Dr SERGE ALLEGREZZA

27.03.2018

Conversation about usefulness of « PIBien-être », statistical difficulties and political challenges

- Debate on (« excessive ») economic growth, quality of life and development
- Brief history of Pibien-être project
- Some results
- Value added and income increases happiness
- Some difficulties
- Overcoming shortfalls: synthetizing informations, forecasting quality of life
- Additional questions and challenges
- Policy relevance and démocratic appropriation
- Where to go from here?

Too much growth for a small country?

Figure 2.2: Ranking of Happiness 2015-2017 (Part 1)

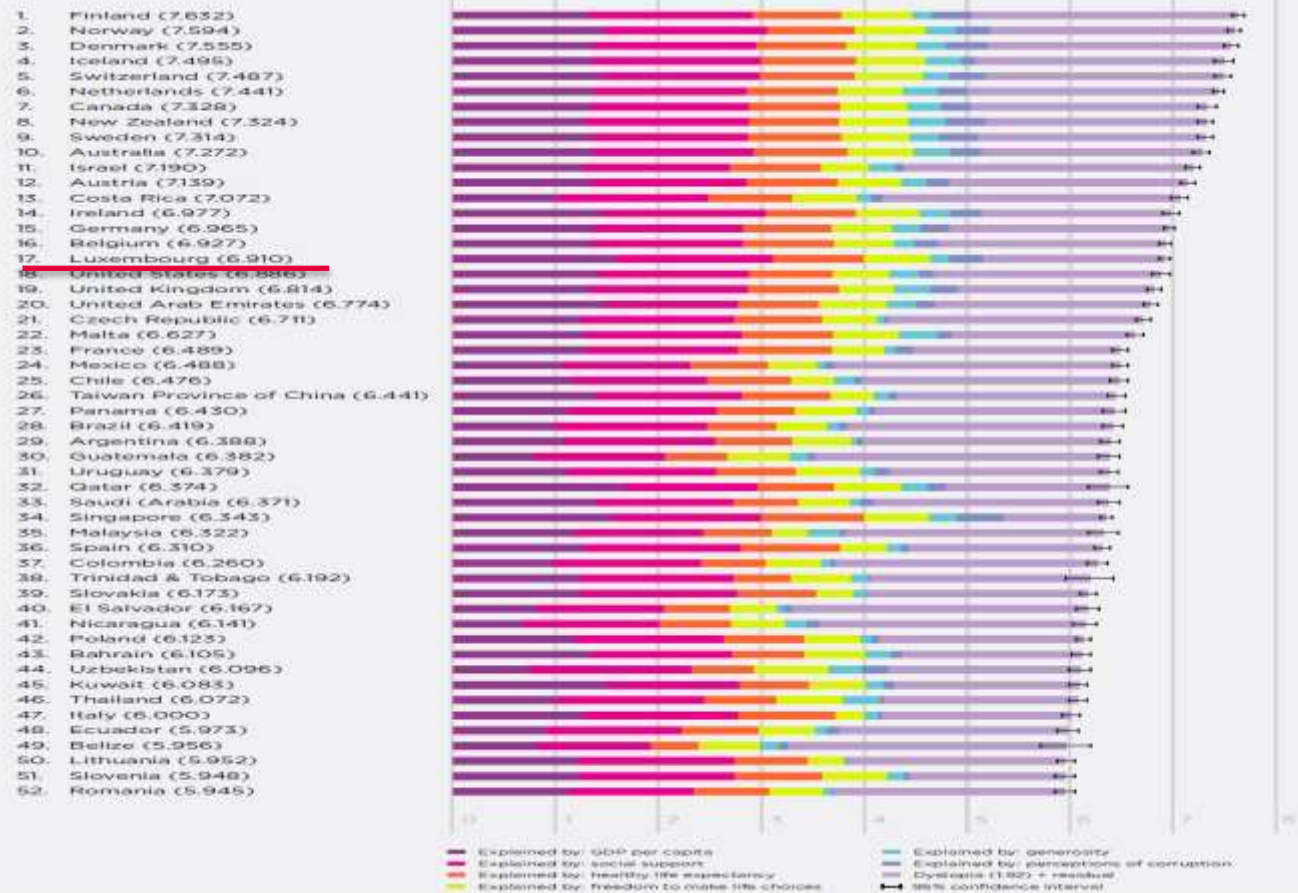

Table 2.1: Regressions to Explain Average Happiness Across Countries (Pooled OLS)

Independent Variable	Dependent Variable			
	Cantril Ladder	Positive Affect	Negative Affect	Cantril Ladder
Log GDP per capita	0.311 (0.064)***	-.003 (0.009)	0.011 (0.009)	0.316 (0.063)***
Social support	2.447 (0.39)***	0.26 (0.049)***	-.289 (0.051)***	1.933 (0.395)***
Healthy life expectancy at birth	0.032 (0.009)***	0.0002 (0.001)	0.001 (0.001)	0.031 (0.009)***
Freedom to make life choices	1.189 (0.302)***	0.343 (0.038)***	-.071 (0.042)*	0.451 (0.29)
Generosity	0.644 (0.274)**	0.145 (0.03)***	0.001 (0.028)	0.323 (0.272)
Perceptions of corruption	-.542 (0.284)*	0.03 (0.027)	0.098 (0.025)***	-.626 (0.271)**
Positive affect				2.211 (0.396)***
Negative affect				0.204 (0.442)
Year fixed effects	included	included	included	included
Number of countries	157	157	157	157
Number of obs.	1394	1391	1393	1390
Adjusted R-squared	0.742	0.48	0.251	0.764

Notes: This is a pooled OLS regression for a tapered panel explaining annual national average Cantril ladder responses from all available surveys from 2005 to 2017. See Technical Box 1 for detailed information about each of the predictors. Coefficients are reported with robust standard errors clustered by country in parentheses. ***, **, and * indicate significance at the 1, 5 and 10 percent levels respectively.

Growth, social capital and happiness

- the erosion of social capital in some developed and developing countries can be the result of the emphasis on economic growth, while paying little attention to its side effects, such as income inequality
- Promoting economic growth and social capital, while containing income inequality can be the way towards happier and (perhaps) more sustainable societies (Bartolini and Sarracino, STATEC,2016)

A brief history of the Luxembourg „Pibienêtre“ project

- OECD „Statistics, knowledge and policy„(Palermo, 2004)
- Stiglitz-Sen- Fitoussi Report (Sorbonne, 2009)
- CES-CSDD: compromise list of indicators (2010-2014)
- First STATEC report 2017 (Peroni,Fumarco, Sarracino)

63 consensual indicators

Le PIBien-être: l'avis commun CES-CDD

Domain	Indicator	Indicator
I. Income and Wealth	1. Gross National Income per capita	7. Inter-quintile and inter-decile ratio
	2. Total household wealth	8. Men-women wage gap
	3. Net adjusted available household income	9. Risk of poverty before social transfers and after social transfers
	4. Real yearly growth rate of various measures of household income	10. People in situation of severe material deprivation
	5. Household total consumption including non-market services	11. People unable to make ends meet
	6. Gini index	
II. Occupation	12. Employment rate	16. People living in households with a very weak work intensity
	13. Unemployment rate and long-term unemployment rate	17. Accidents at work
	14. Wage earners with temporary contracts	18. Feelings of job insecurity
	15. Frequency of forced part-time work	
III. Housing	19. Number of rooms per person	22. Number of new dwellings per year
	20. People living in overcrowded dwelling	23. Dwellings in "Wohnvorranggemeinden"
	21. Relative part of dwelling costs	
IV. Health	24. Life expectation at various ages and in good health	28. Drug consumption (antidepressants)
	25. Prevalence and intensity of mental problems	29. Share of adults declaring to be in good or very good health
	26. Suicide rate	30. Share of adults declaring to have chronic disease
	27. Death by cause	31. Share of adults declaring to be limited in their everyday activity because of health reasons
V. Work-life balance	32. Share of employees working very long hours	35. Time spent commuting
	33. Leisure and occupation time	36. Share of parental living (woman/man)
	34. Employment rate of women with children in mandatory schooling age	37. Satisfaction with work-life balance
VI. Education and skills	38. Educational attainment	40. Reading skills at 15
	39. Young people having left education and training early	41. Civic skills of students
VII. Social relationships	42. Social network support	44. Time spent volunteering
	43. Membership in social, cultural and sport associations	45. Frequency of social contacts
VIII. Governance and civic engagement	46. Voter turnout	49. Knowledge and use of Luxembourgian, French, German, and/or English
	47. Consultation on rule making	50. Confidence in institutions
	48. Membership in political and civic associations	51. Feeling of discrimination
IX. Environment	52. Air quality and satisfaction with quality	56. Share of renewable energies on the final consumption of energy
	53. Water quality	57. Transport mode (car/shared transport)
	54. Noise	58. Land use
	55. Recycling rate	59. Bio agriculture (hectars)
		60. Environmental disease burden
X. Personal security	61. Offence rate	62. Feeling of safety (walking alone at night)
XI. Subjective well-being	63. Life satisfaction

How's life in Luxembourg?

Table: Highlights

Change	Indicator	Comparison
	Various measures of income, and wealth increased since 2009.	
	Frequency of social contacts increased.	
	Educational attainment increased.	
	Early education leaving increased.	
	The men-women wage gap halved since 2009.	
	The use of renewable energies (+2%)	
	Air pollution (+7%)	
	Share of people with mental problems (+20%)	
	Share of adults with chronic diseases (+1.2%)	
	Fatal accidents at work (+1.94 x 100K workers)	

Some questions on the way forward

„Quality of life in Luxembourg the PIBien-être project“

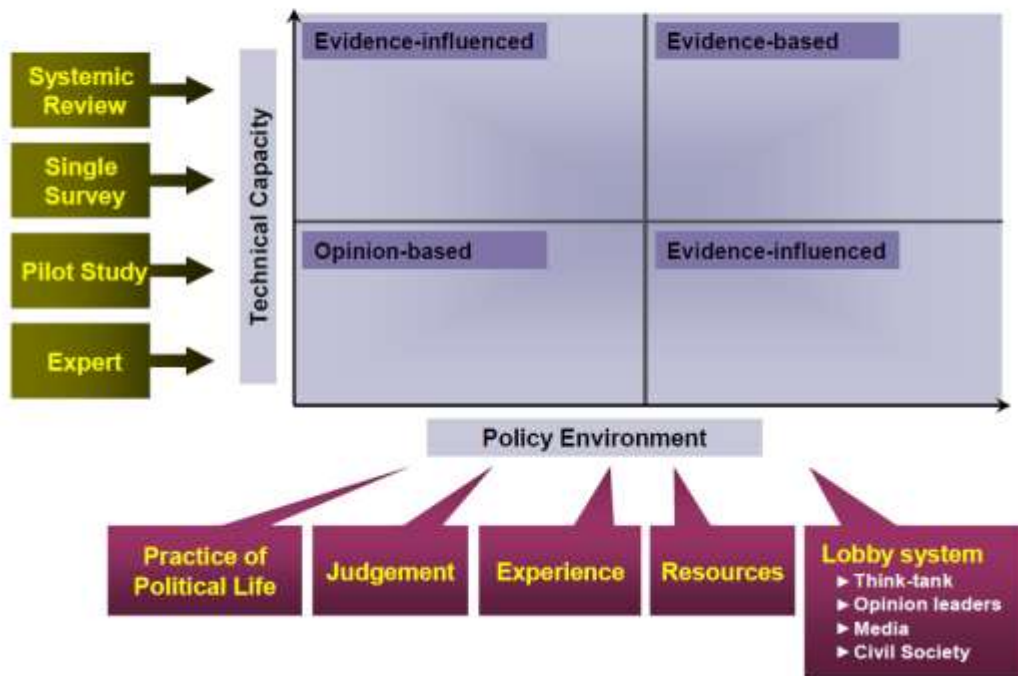

- The 63 indicators : too much ?
- Is the framework well suited, what is missing ?
- Missing anchor in philosophy, „eudemonia / hedonism“
- Sociology, psychology or „happiness studies“
- Expertise lacking : health and psychotropics
- Data constraints: comparable (EU), chronology, meaningful, heterogeneity
- Data shortage and timely availability: arbitrage, inventivity
- Subjective/psychological or objective
- Give a broad and nuanced picture of the dimensions of „wellbeing“

Policy making

- Debate on the goal of public policy: who should take care? Government, individuals, families, ngos...?
- Growth-debate: sustainable, selective, qualitative, inclusive, intelligent,...
- Make it simple: inequality, Gni /head, CO2, unemployment
- Promote, equalize happiness?
- Integrating „pibienêtre“ in official policy documents, parliamentary debates (see oecd)

Evidence based policy?

Figure 1. Dynamic of policy-making
