

BREEZE
TECHNOLOGIES

Breeze Technologies is a technology leader for air quality sensors, data and clean air action intelligence.

Breeze Technologies is a technology leader for air quality sensors, air quality data and clean air action intelligence. The company leverages the internet of things and artificial intelligence to help cities and businesses create better clean air action plans and a more liveable environment.

Breeze Technologies was founded in 2015 and has been recognised as one of the most promising European startups by the European Parliament and the European Commission. Breeze works with partners such as Microsoft, NTT and SAP and has customers in 11 countries on three continents.

Robert Heinecke is an entrepreneur, futurist and smart city expert. He is the CEO of Breeze Technologies. He founded the company in 2015 and it has since become a German industry leader in air quality sensors, data and analytics. Before that, Robert worked for multiple international consultancies in strategy and digitalisation. He holds degrees in Computer Science and IT Management & Consulting. Robert has featured on the "Forbes 30 Under 30 Europe" and "Capital 40 Under 40" lists and was the 2019 Young Green Tech Entrepreneur of the Year. He is a member of the scientific advisory board of the Federal Association for Electric Mobility in Germany and advisor to French UrbanAI, and was previously on the European Commission's "Young Leaders of Industry" sustainability panel. Robert is also a European Climate Champion.
