

AlgaEnergy is a nature-based agricultural bio-solution to improve the competitiveness of farmers, contribute to food security and promote regenerative farming practices.

AlgaEnergy develops innovative technologies in the form of bio-stimulants, bio-fertilisers and bio-pesticides to optimise current farming practices and regenerate degraded soils. Taking advantage of over 50 years of research and innovation in the field of phytoplankton, this fast-growing and multi-award-winning company has developed sustainable and natural bio-solutions that contribute to minimising the main challenges that the current food system faces. Its solutions enhance the competitiveness of farmers by reducing the application of chemical fertilisers and by better resisting the detrimental effects of climate stresses, while also increasing agricultural yields and food quality, and improving the microbiome of soils.

Miguel Rodríguez-Villa Förster is a lawyer and economist specialised in business administration. He has more than ten years of experience in fields such as mergers and acquisitions and business development, in particular in the field of agriculture. Miguel started his career at AlgaEnergy in 2017 and coordinates the implementation of its international strategy at a global level.

Miguel Rodríguez-Villa Förster
Vice President, Global Strategy
